Experiment 3: Survey Report on Emerging Trends in Low-Code Development

Aim

To study emerging trends in low-code development.

Theory

Trends include AI-assisted app building (Zia), hybrid low-code and pro-code, citizen developers, integration-first platforms, and governance controls. The gym application uses AI build assistance, QR, signature and formula fields.

Procedure

1. Study documentation and reports on low-code platforms.

2. List the trends.

3. Relate each trend to a feature used in the gym application.

Output

Result

The main trends were studied and related to the gym application.
