Experiment 4a: Data Modelling and Form Design

Aim

To design the Membership Enrollment Form with structured fields and a report.

Theory

Data modelling organises data into fields with suitable types. The form stores name, email, phone, address, emergency contact, health notes, age, date of birth, workout time, plan and gender.

Procedure

1. Create the form Membership_Enrollment_Form.
2. Add basic fields; make Phone Number mandatory.
3. Configure choices for Membership Plan, Preferred Workout Time and Gender.
4. Open the live form and enter data.

Output

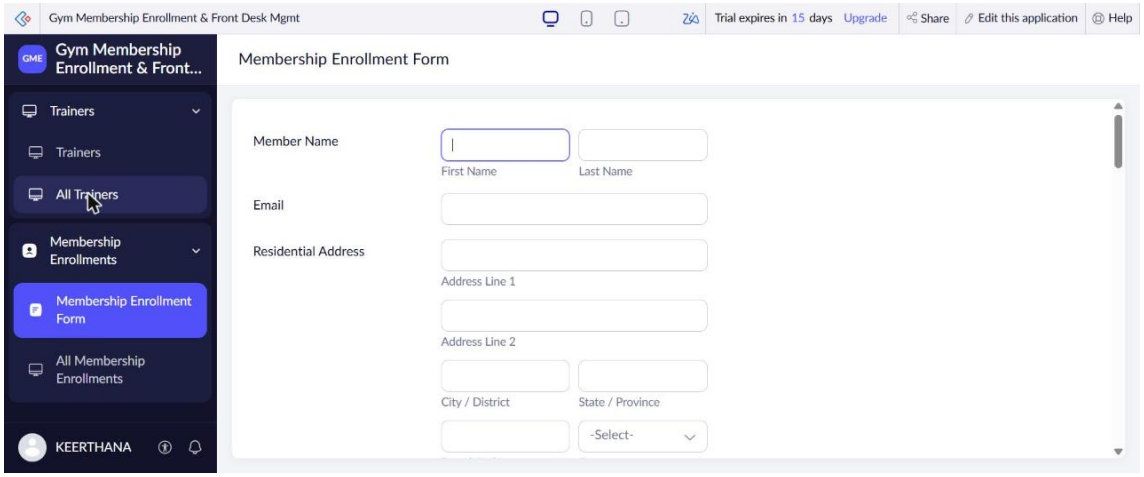

Fig 4a.1 Live form

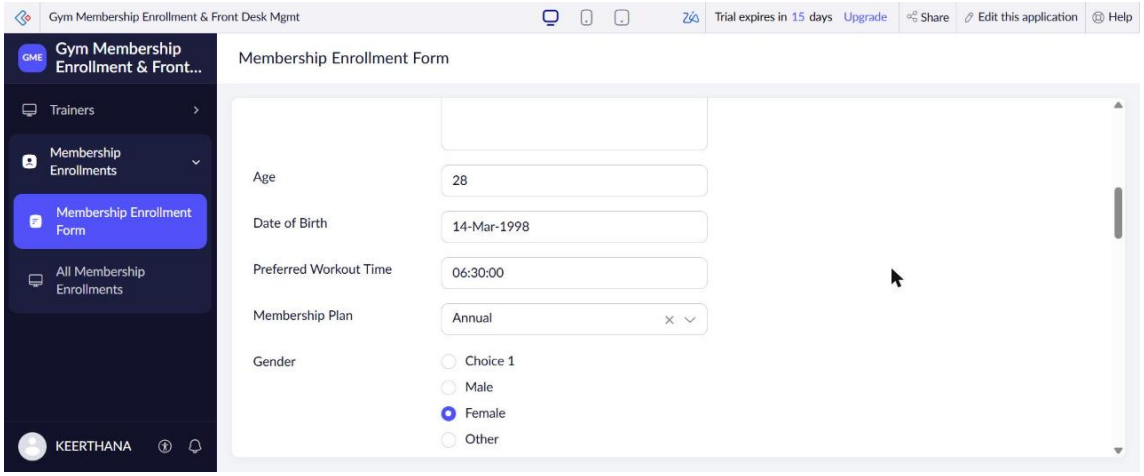

Fig 4a.2 Form filled with details

Result

The basic enrollment form was designed and tested.
