Experiment 4b: Advanced Fields (Assignment LC-02)

Aim

To add the 17 advanced fields: decision box, rich text, URL, image, percent, currency, decimal, date-time, SubForm, lookup, signature, file upload, audio, video, auto number, formula and QR code.

Theory

A SubForm captures repeated rows (Family_Members_Enrolled, max 5). A Lookup links to Trainers. The formula Total_Amount_Payable = Fee - (Fee x Discount / 100). The QR field encodes the Membership ID.

Procedure

1. Create the Trainers form and add three trainers.
2. Add the advanced fields; make Requires Personal Trainer and Digital Signature mandatory.
3. Add the SubForm (name, age, relationship) limited to 5 rows.
4. Add Assigned_Trainer_Lookup to Trainers.
5. Add formula, auto number and QR fields; make Total Amount Payable visible.
6. Submit two records.

Output

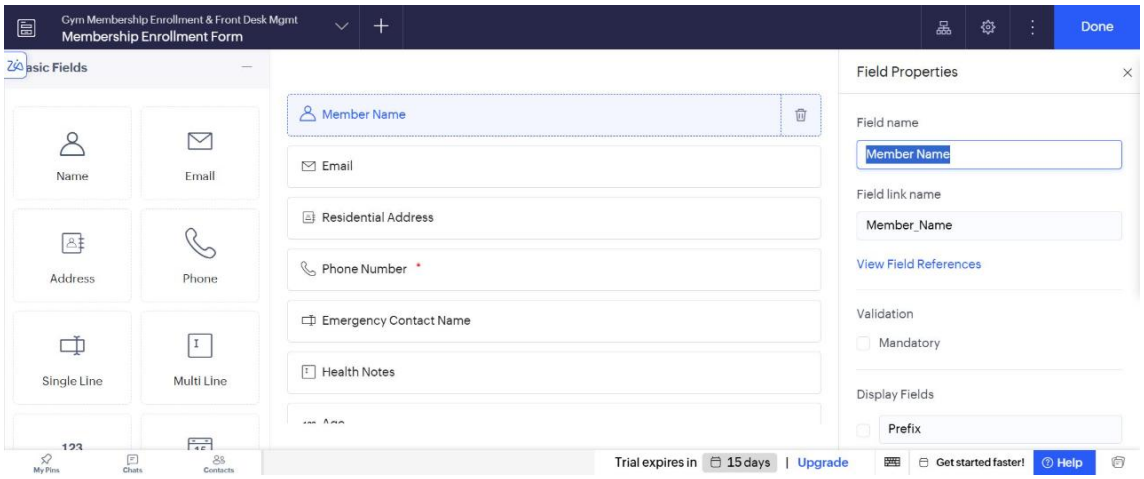

Fig 4b.1 Form builder with advanced fields

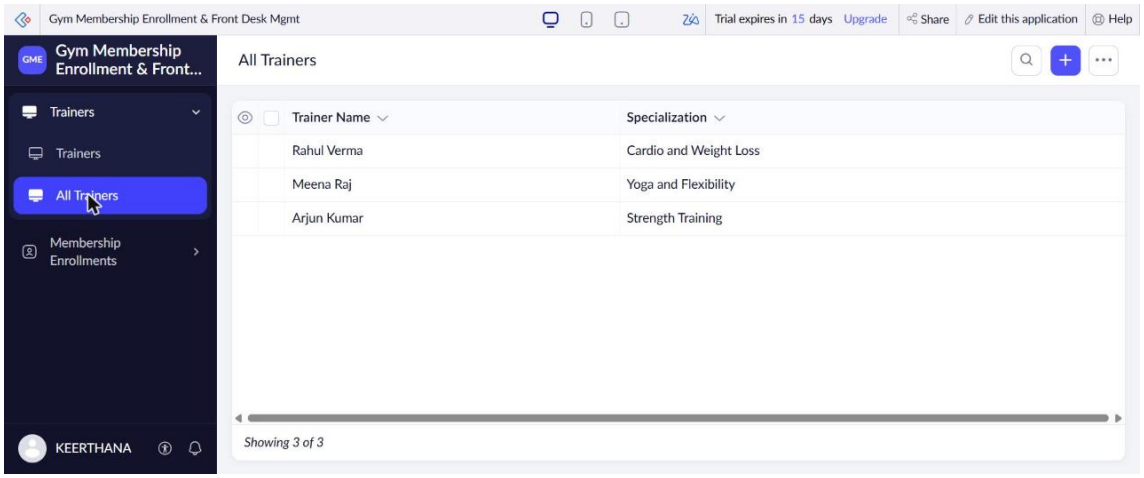

Fig 4b.2 Trainers records

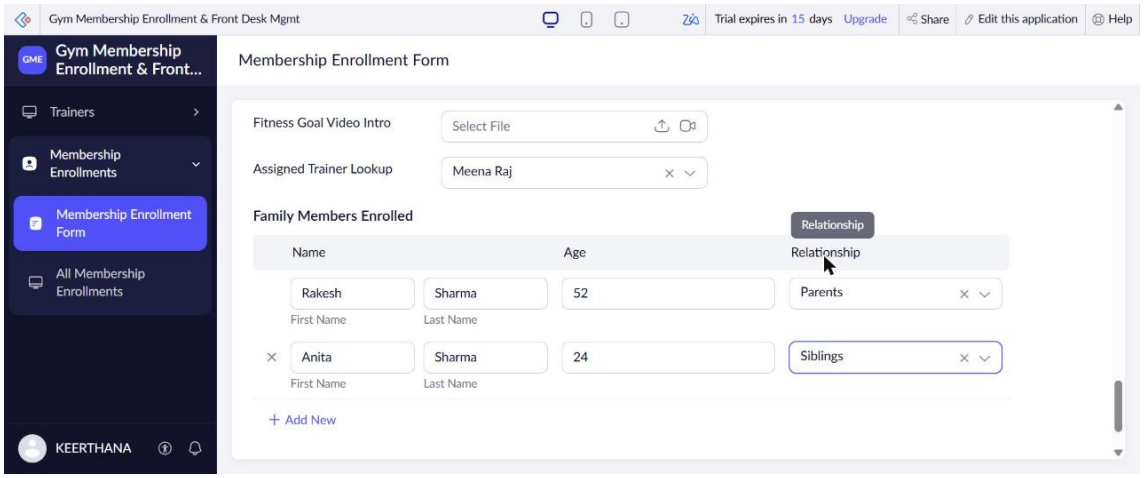

Fig 4b.3 SubForm rows and trainer lookup

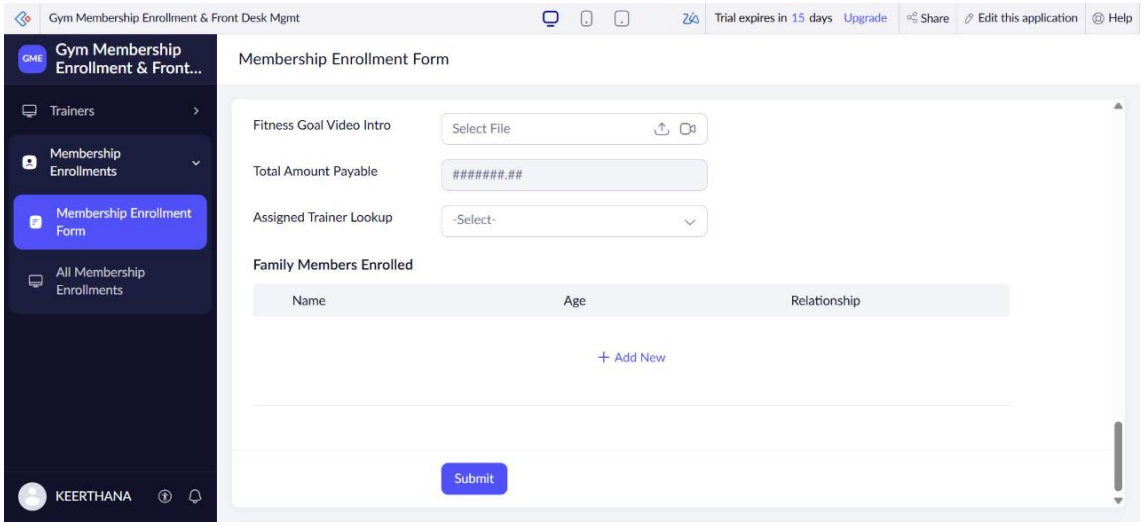

Fig 4b.4 Total Amount Payable, lookup and SubForm

Note: range validations (discount 0-20, fee not negative, file limits) and the GYM-MEM-year prefix are not yet configured; Auto Number currently gives 1, 2.

Result

The advanced form was built with all fields.
