Experiment 5b: Dashboards

Aim

To create and configure a dashboard in Zoho Creator for visually analysing gym membership enrollment data using a KPI panel and a chart.

Theory

Dashboards (built in the Page Builder) display data through panels, charts, gauges and reports. In this experiment Gym_Enrollment_Dashboard shows the total number of enrolled members and a column chart of members by Membership Plan, both drawn from Membership_Enrollment_Form.

Procedure

1. Open the Zoho Creator application and click the + (Create New Component) icon.

2. Choose Page, then Blank, and name it Gym_Enrollment_Dashboard.

3. Drag a Panel onto the canvas, set Display data to Count of the Membership Enrollment Form, and change its label to Total Members Enrolled.

4. Drag a Column chart, select Membership Enrollment Form, set X-axis Category to Membership Plan and Y-axis Aggregate to Count.

5. Click Done to save the page.

6. Open the live application and view the dashboard.

Output

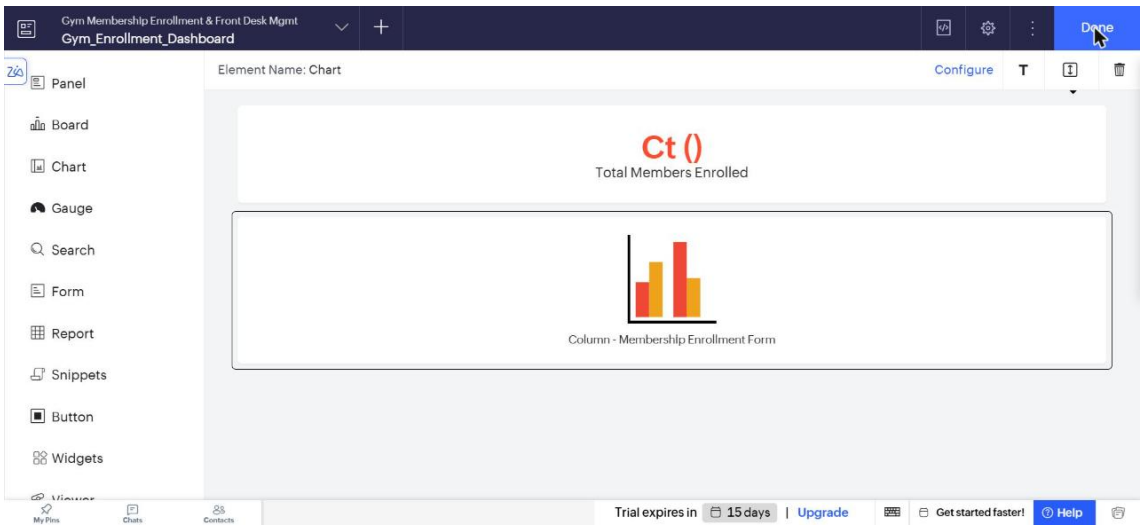

Fig 5b.1 Dashboard layout in Page Builder

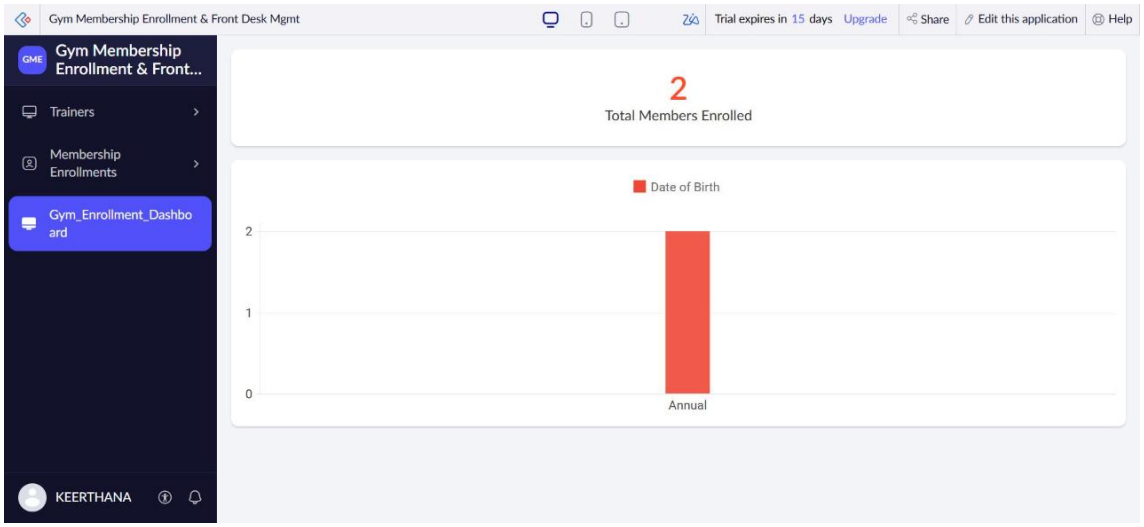

Fig 5b.2 Live dashboard: total members = 2, chart by Membership Plan

Result

Gym_Enrollment_Dashboard was created and shows 2 enrolled members and the plan-wise chart. Both sample records currently use the Annual plan, so the chart has one bar.
