Experiment 6: Workflow

Aim

To create a workflow in Zoho Creator that validates the Referral Discount Percent and Membership Fee Paid fields when the enrollment form is submitted.

Theory

Workflows automate actions on form events using Deluge scripts. A 'Validations on form submission' workflow runs before the record is saved and can cancel the submission with an alert. The assignment requires Referral_Discount_Percent between 0 and 20, and the fee to be non-negative.

Procedure

1. Click + (Create New Component) and select Workflow, then On a form event.

2. Choose Membership Enrollment Form, record event Created, and form event Validations on form submission.

3. Name the workflow Validate Discount and Fee and click Create Workflow.

4. Click Add New Action and write the Deluge script that shows an alert and cancels the submit when the discount is above 20 or below 0, or the fee is below 0.

5. Save the script and click Done.

6. Confirm the workflow is Enabled with 1 action.

Output

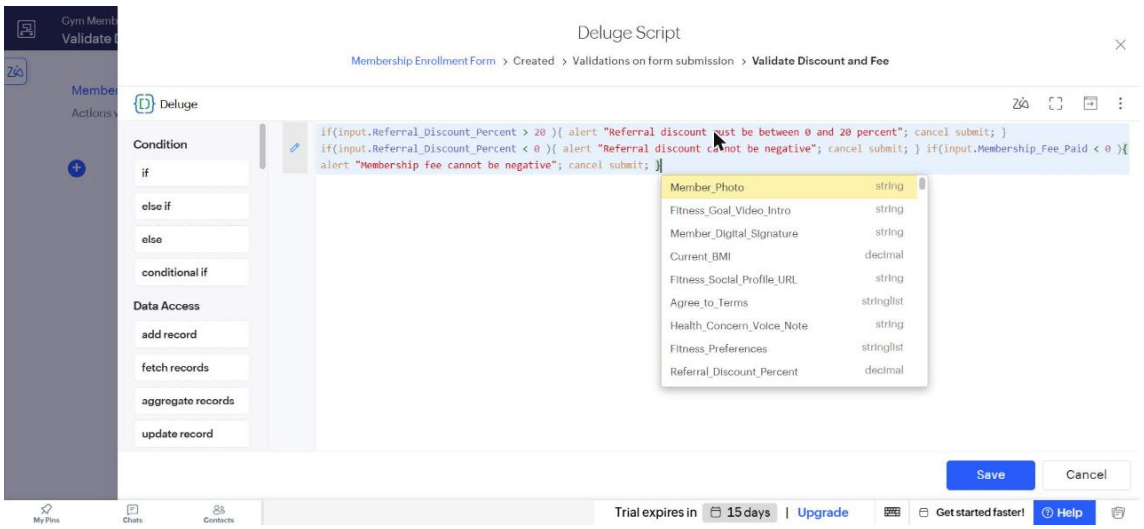

Fig 6.1 Deluge validation script

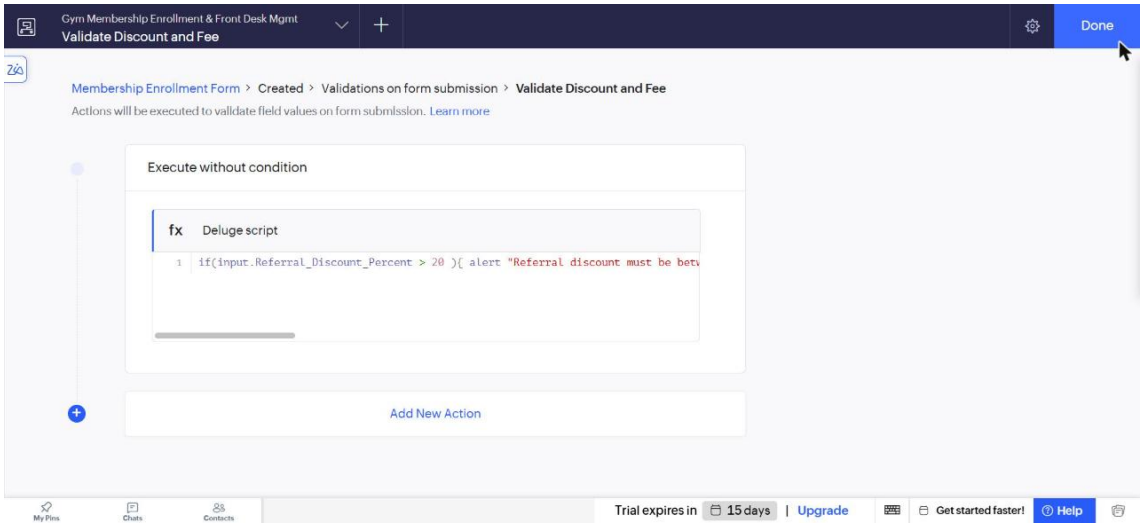

Fig 6.2 Workflow with the Deluge action

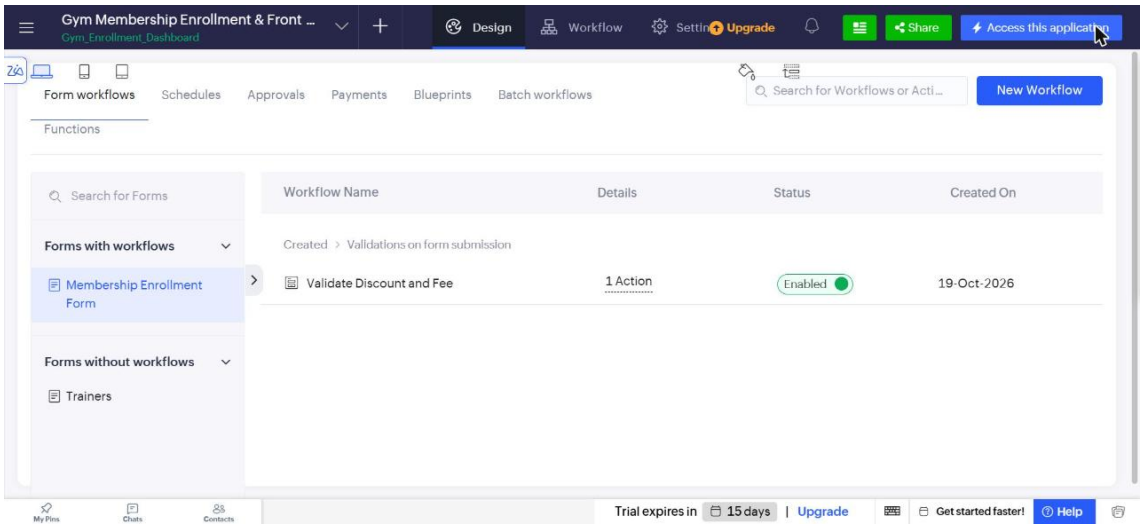

Fig 6.3 Workflow list showing Validate Discount and Fee enabled

Script: if(input.Referral_Discount_Percent > 20){ alert ...; cancel submit; } if(input.Referral_Discount_Percent < 0){ ... } if(input.Membership_Fee_Paid < 0){ ... }

Result

The validation workflow was created and enabled. It was not exercised with an invalid submission in this session.
