# Experiment 7: Integrating Zoho Creator

### *Aim*

To integrate the gym application with an external service by sending an automatic email confirmation to each member after enrollment.

### *Theory*

Integration lets Zoho Creator exchange data with other services. Creator provides notification actions (email, SMS), Zoho app integrations and REST APIs. A 'Successful form submission' workflow runs after the record is saved, so it can send the member their confirmation by email.

### *Procedure*

1. Click + (Create New Component), choose Workflow, then On a form event.

2. Select Membership Enrollment Form, record event Created, form event Successful form submission.

3. Name the workflow Send Enrollment Confirmation.

4. Click Add New Action, choose Notification, then Send email.

5. Set From to the admin email, To to the member's Email field, and the subject Gym Membership Enrollment Confirmation.

6. Save the action and click Done.

7. Confirm the workflow is enabled in the workflow list.

### *Output*

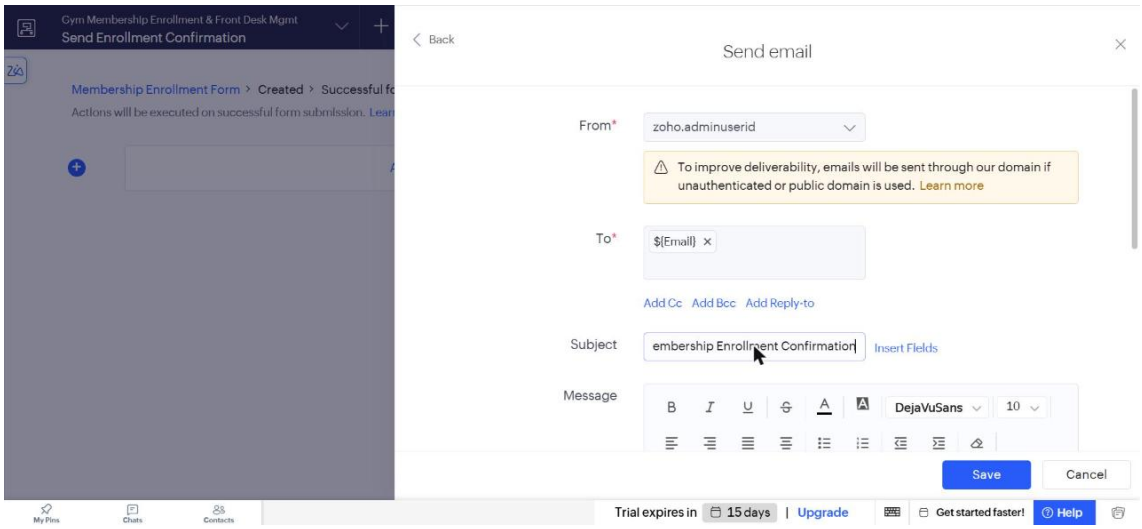

Fig 7.1 Send email action configuration

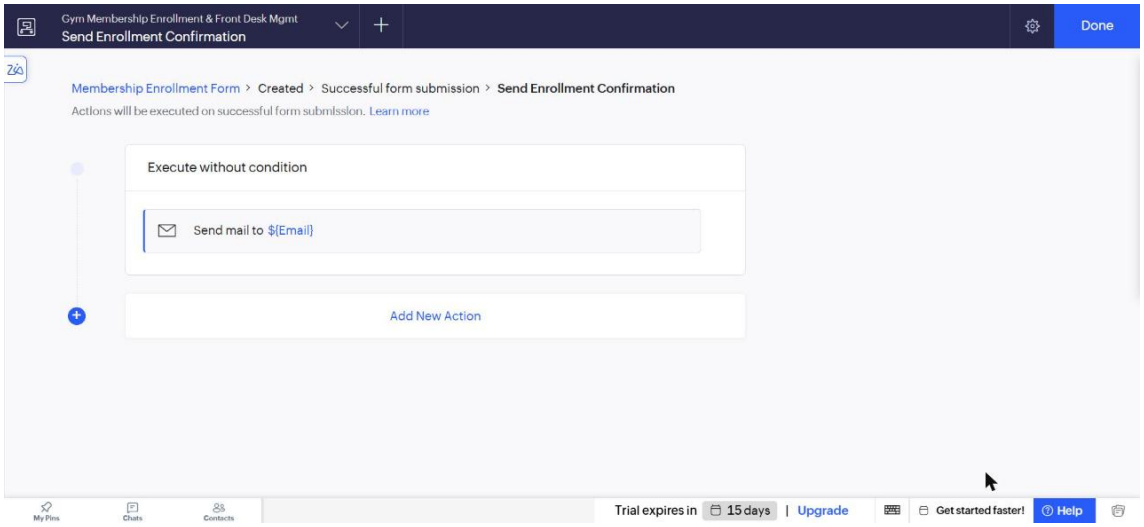

Fig 7.2 Workflow action: Send mail to the member's Email

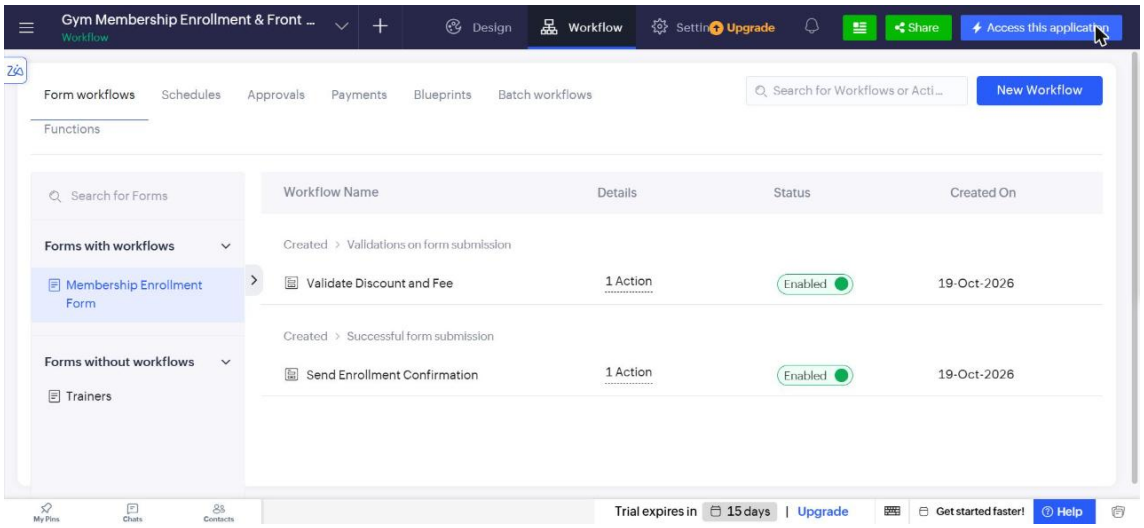

Fig 7.3 Both workflows enabled

### *Result*

An email confirmation workflow was configured and enabled. A test enrollment email was not sent in this session.
