Experiment 8: User Management and Role-Based Access Control

Aim

To define a permission set and a role for front desk staff in the gym application.

Theory

Permission sets control which forms, reports and pages a user can access. Roles define the record-visibility hierarchy. Together they give role-based access control.

Procedure

1. Open the app builder and go to Settings, then User Permissions.

2. In the Permissions tab click Add Permission and name it Front Desk Staff.

3. Give access to Membership Enrollment Form (view: All Membership Enrollments report) and Trainers.

4. Save the permission set.

5. Open the Roles tab and click Add Role.

6. Create the role Front Desk reporting to CEO.

Output

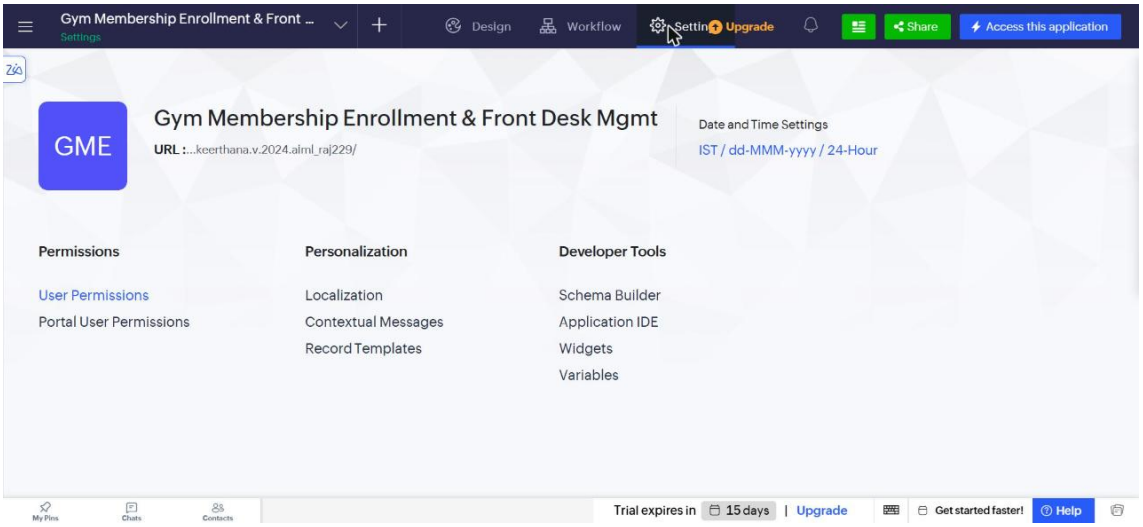

Fig 8.1 Application settings

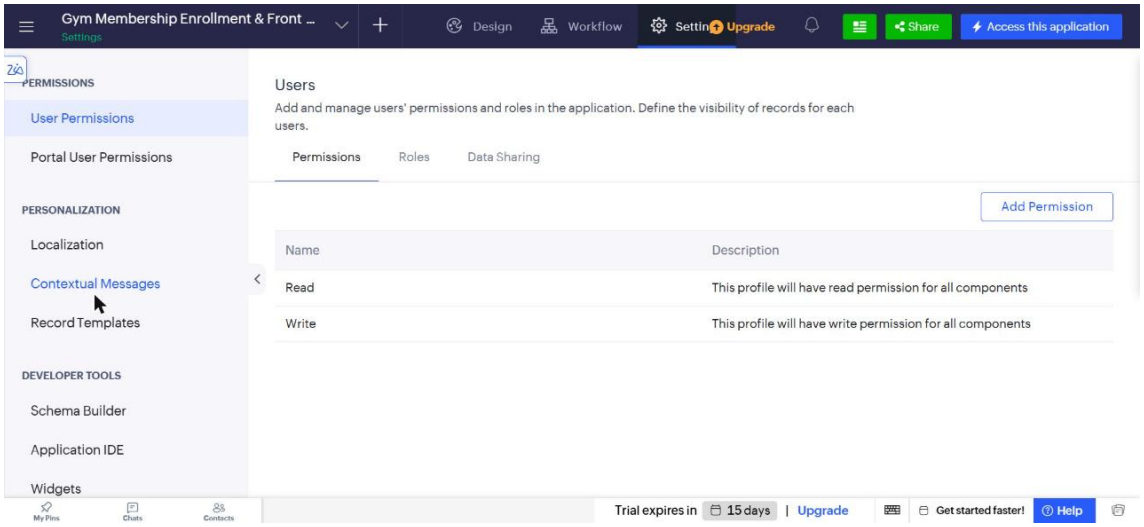

Fig 8.2 Permissions tab

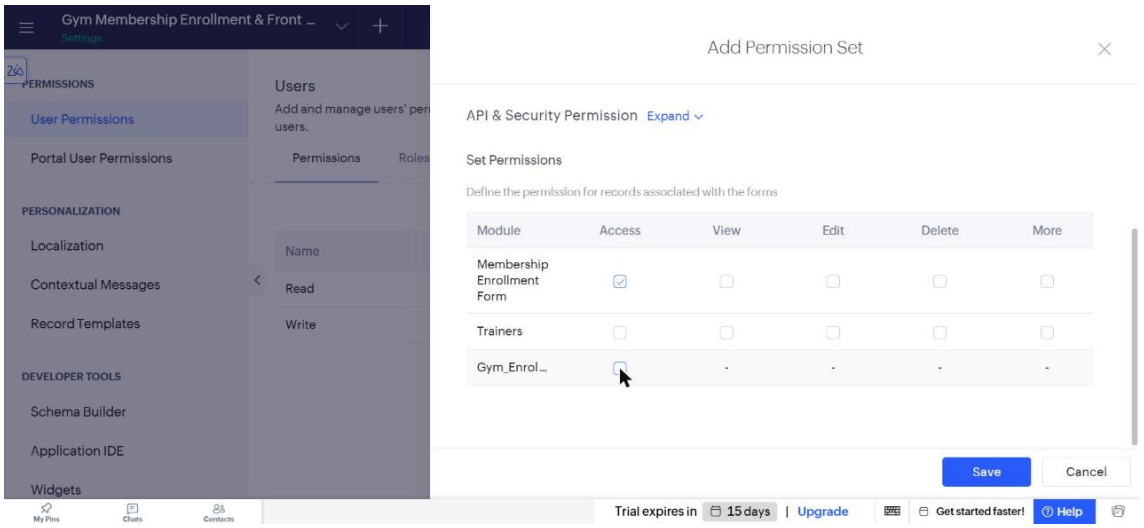

Fig 8.3 Front Desk Staff permission set

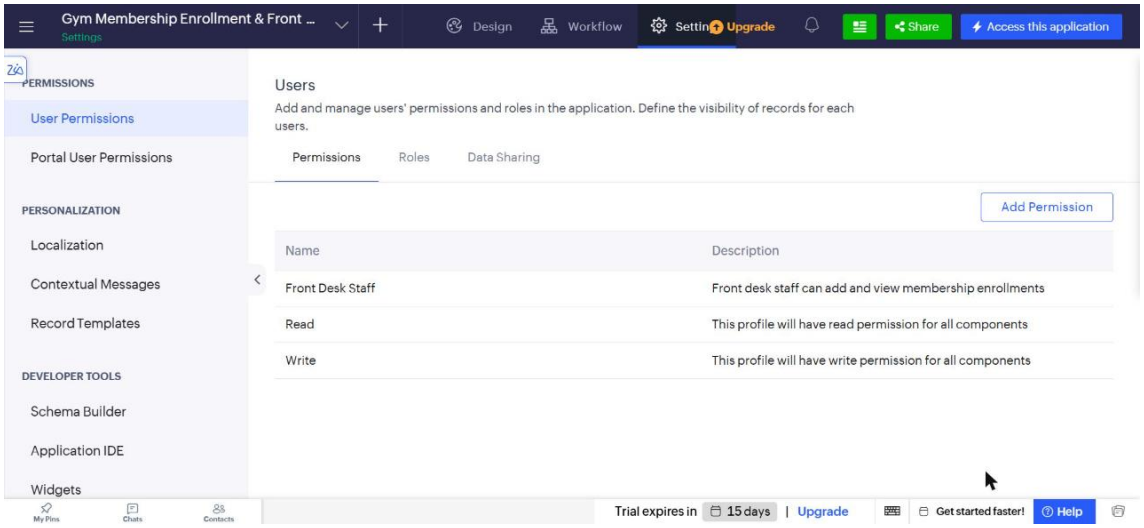

Fig 8.4 Permission set saved

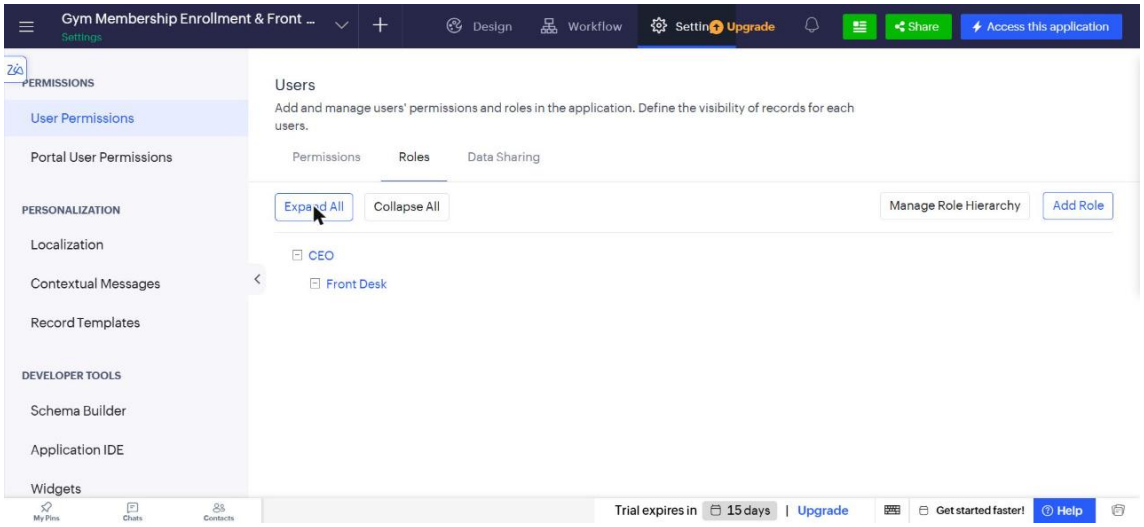

Fig 8.5 Roles hierarchy with Front Desk

Result

The Front Desk Staff permission set and the Front Desk role were created. No external users were invited in this session.
