Experiment 11: Deploying from Development to Production

Aim

To deploy the gym application through the Stage and Production environments.

Theory

Zoho Creator environments (Development, Stage, Production) allow changes to be built and tested before they reach end users. The app is added to the environments, published to Stage for testing, then published to Production.

Procedure

1. Open the menu and select Environments under Deploy.
2. Click Add Application and select Gym Membership Enrollment & Front Desk Mgmt.
3. Click Add; the development app is created.
4. Review the Stage and Production columns; version 1.0 appears in each.
5. Use the Publish menu to publish later changes to Stage and then Production.

Output

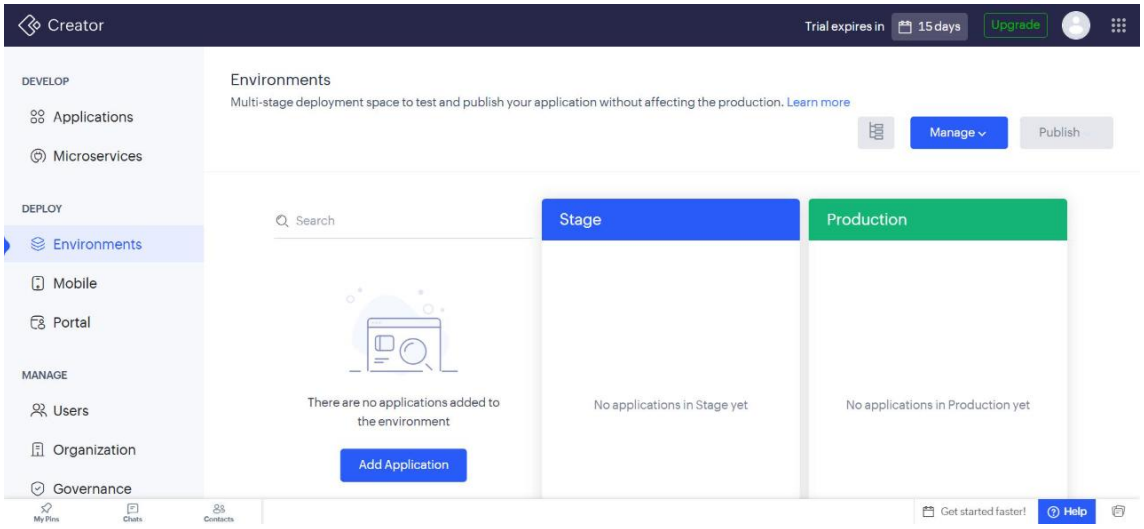

Fig 11.1 Environments page before adding the app

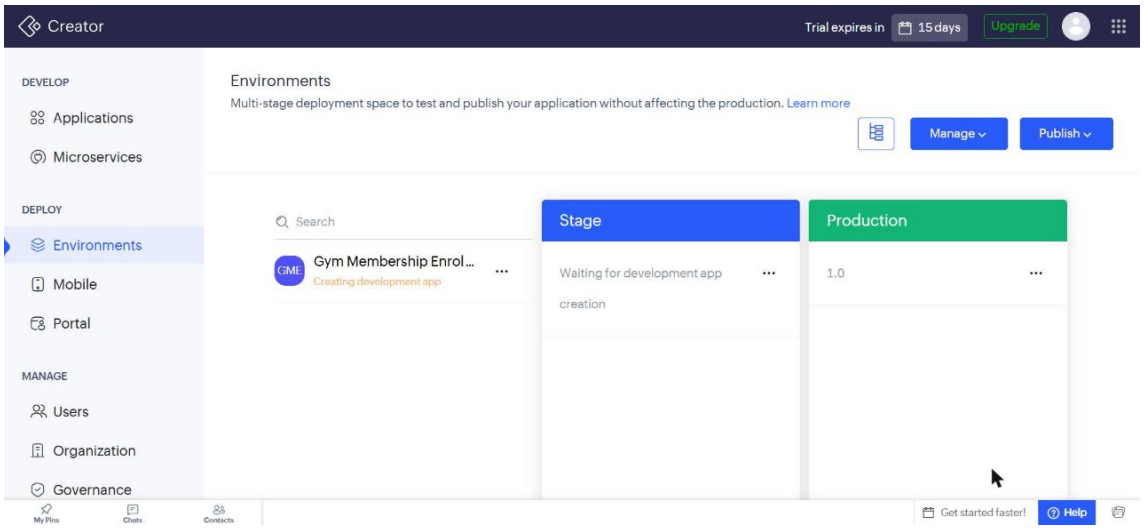

Fig 11.2 Application added; stage app being created

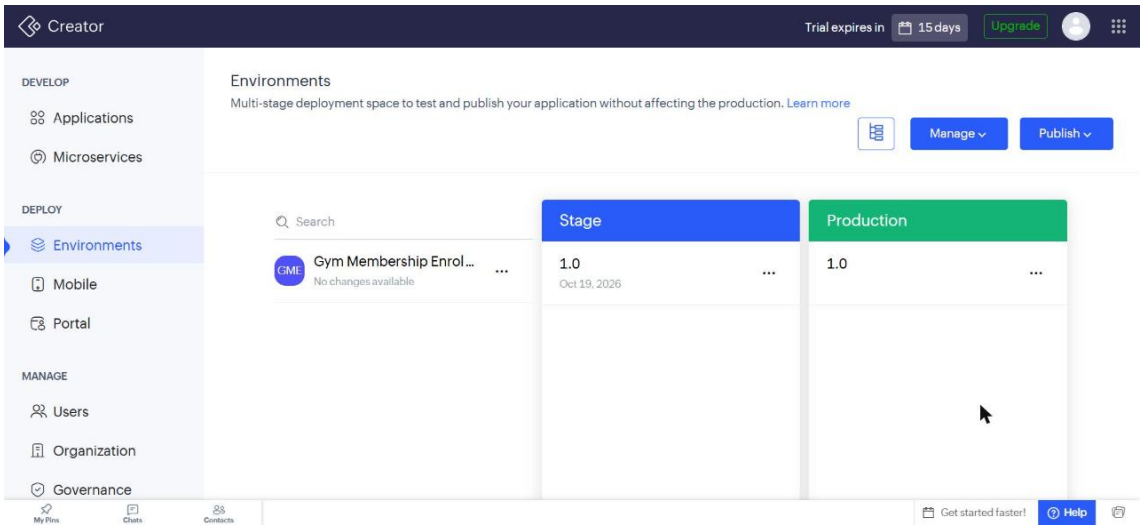

Fig 11.3 Stage 1.0 and Production 1.0 available

Result

The application was added to the environments and version 1.0 is available in Stage and Production.
