Experiment 14: Capstone Project - Documenting and Presenting the Gym Membership Enrollment Application

Aim

To document the end-to-end Gym Membership Enrollment application and present its design, features and outcomes.

Theory

A capstone consolidates all earlier work: data model, forms, reports, dashboards, workflows, security and deployment into one working application that can be demonstrated.

Procedure

1. Summarise the problem: manual gym enrollment and front desk handling.

2. Document the data model: Membership_Enrollment_Form (17 advanced fields) and Trainers form with lookup.

3. Document the SubForm for family members and the formula for Total_Amount_Payable.

4. Show the report with Membership ID, QR code, total and trainer.

5. Show the dashboard, validation workflow and email confirmation workflow.

6. Show roles, permission set and Stage/Production deployment.

7. List limitations and future scope.

Output

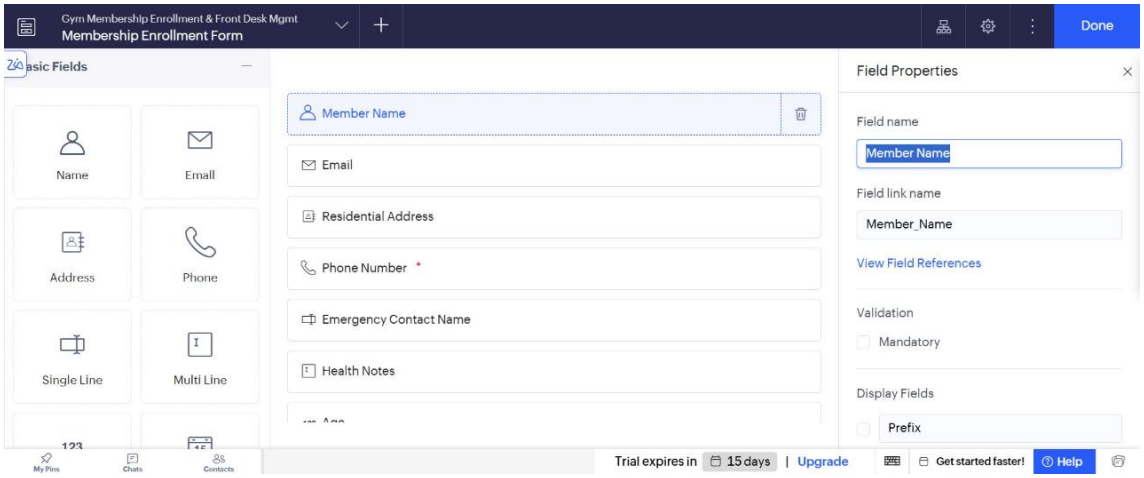

Fig 14.1 Form with advanced fields

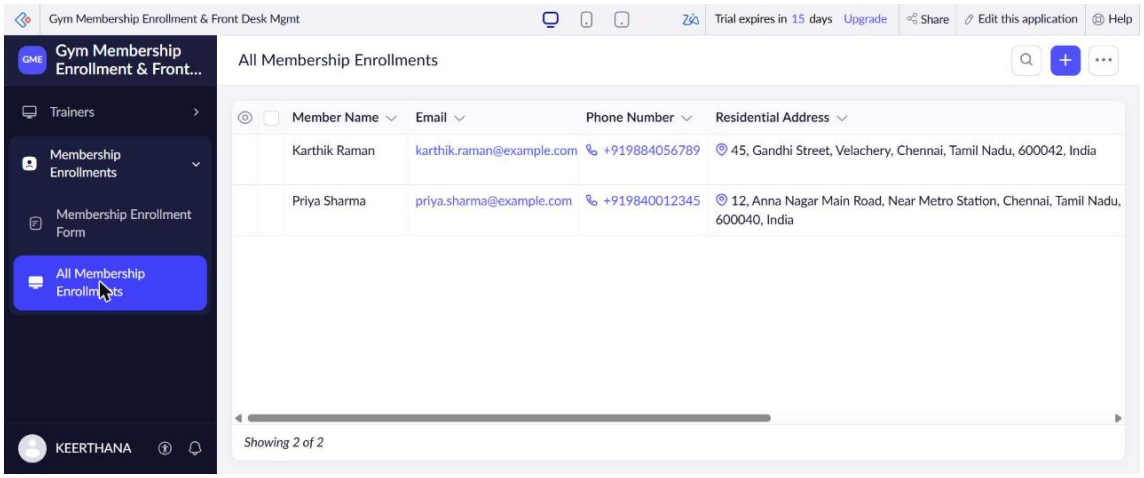

Fig 14.2 Report of submitted records

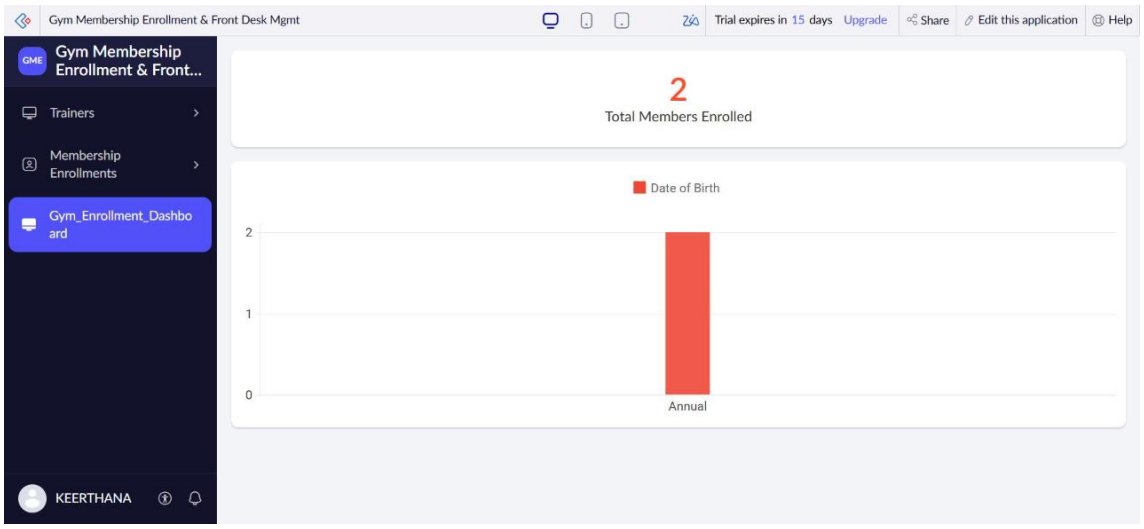

Fig 14.3 Dashboard

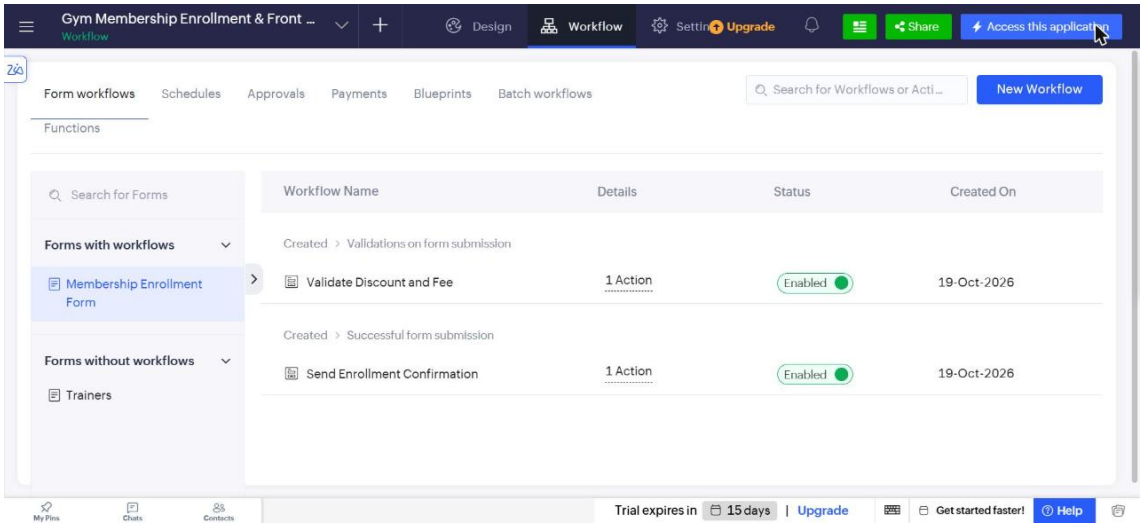

Fig 14.4 Workflows

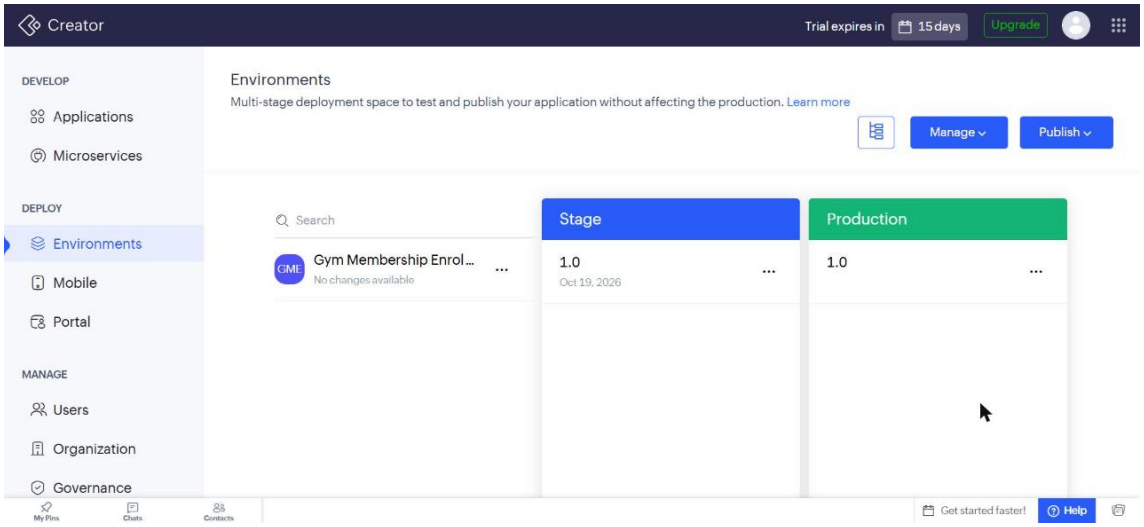

Fig 14.5 Environments

Note: the sample record set did not include an Experiment 14, so this title was chosen by the assistant; edit it if your syllabus names a different Experiment 14.

Result

The capstone documents the complete gym enrollment application.
